

CP Kiosk Transformer Upgrade

Project Outline

Aughton Automation were required to upgrade Ten Cathodic Protection (CP) Kiosks that were located remotely throughout the North West region of the UK.

Project Delivery & Innovations

Aughton Automation executed this project utilising a G19 design, as opposed to Ten individual G19's making it very cost effective. We designed in both LHS & RHS Layouts to the Kiosks to allow for contingency options for all North West future build CP Kiosks.

Each Pre-Construction Site Survey Report contained information regarding the existing Characteristics of the kiosk (all ten were different in many ways. i.e. – Specification, Access, Hazards, etc...)
